SUMMARY

Final-year Software and Information Engineering student at Singidunum University, looking for a junior full-stack role with a backend focus on TypeScript (Node.js, NestJS) and Java (Spring Boot). Experienced in building secure REST APIs with Spring Boot and NestJS, containerizing services with Docker, and deploying production web applications on Vercel.

SKILLS

LANGUAGES :	TypeScript, JavaScript, Java, Python, Solidity
BACKEND :	Node.js, NestJS, Express, Spring Boot, REST APIs, JWT, RBAC
FRONTEND :	React, Next.js, Tailwind CSS, GSAP
DATA & DEVOPS :	PostgreSQL, Prisma, Docker, Git, CI/CD (GitHub Actions), Vercel
TESTING :	JUnit, Vitest

PROJECTS

Microservices Restaurant Management System

github.com/jxpaa25/restaurant-management-backend

Java • Spring Boot • Spring Security • PostgreSQL • Docker • JWT

- Split the backend into an Identity service and a Restaurant service, each with its own PostgreSQL database, so authentication runs separately from menu, table and order logic.
- Built a shared library with the JWT filter and token validation used by both services, and restricted endpoints by role with Spring Security's @PreAuthorize.
- Implemented the order lifecycle (pending, completed, cancelled) in @Transactional service methods, so each order change is saved in full or rolled back.
- Containerized both services and their databases with Docker Compose and published the REST API documentation as a Postman collection.

Tehnički Pregled Lazarević 1968

tehnickipregledlazarevic-pozarevac.rs

Next.js • TypeScript • Tailwind CSS • GSAP • Vercel

- Built the production website for a vehicle inspection business in Požarevac, working out the requirements directly with the owner.
- Deployed it on Vercel and connected the business's custom .rs domain.
- Implemented technical SEO for local search: schema.org LocalBusiness structured data, a sitemap and robots file, and a statically generated page with its own metadata for each service.
- Built responsive layouts and scroll animations with Tailwind CSS and GSAP.

Decentralized Automated Market Maker (AMM)

github.com/jxpaa25/Web3AcademyTasks/tree/main/amm

Solidity • ERC20 • OpenZeppelin

- Built a Uniswap V2-style decentralized exchange and deployed it to the Ethereum Sepolia testnet.
- Implemented the Factory-Pair-Router architecture, where the factory deploys a liquidity pool contract for each token pair.
- Wrote the pair logic that mints LP tokens using the constant product formula and charges a protocol fee on swaps.

NNCraft: Deep Learning Framework from Scratch

github.com/jxpaa25/NNCraft

Python • NumPy

- Built a dense neural network library using only NumPy, to learn how frameworks such as PyTorch work internally.
- Implemented matrix-based backpropagation, ReLU and sigmoid activations, and five loss functions, including MSE and cross-entropy.
- Added SGD with momentum, AdaGrad, AdaDelta, RMSprop and Adam optimizers, plus dropout and L1/L2 regularization.

EDUCATION

● B.Sc. Software and Information Engineering	2023 – Expected 2027
Singidunum University, Belgrade. Final (4th) year.	
● Information Technology	2019 – 2023
Electrotechnical School "Rade Končar"
